

The first two DEC customers for Caplin systems are expected to be a Houston-based oil company and a German defence contractor. Caplin's primary market is in scientific and technical computing, particularly image processing, simulation and numerical analysis. The company is seeing an increasing demand for its systems from financial institutions performing complex market analysis and forecasting.

"We are pleased to have met DEC's very stringent supplier requirements and profits have been listed as a Qualified Vendor," said managing director Paul Caplin. "It gives us the chance to reach wider markets, via the Digital salesforce. And of course it is a great testimonial to the quality of our products."

Caplin products run under VMS and execute programs written in a variety of languages including FORTRAN, C, Pascal and Ada.

SEQUENT PLANS EURO R&D CENTRE

Sequent Computer Systems is to open a European Research and Development Centre in Sophia Antipolis, near Nice, early in 1991. The new centre will provide Sequent with an R&D facility near to its major European customers, as well as a facility for software production. Previously, all research, development and production was based at the company's Oregon headquarters.

David Rogers, who has the new post of vice president of European engineering, said "By 1995 we aim to employ 250 people at the development centre, with new software products scheduled to start shipping in the second quarter of 1992.

We selected the Cote D'Azur site because, in addition to attractive surroundings, it is a business oriented, multilingual community with a strong focus on technology."

Initially, the central focus of the new facility will be the development of open systems-based communications software and object-oriented database application software, to work with Sequant's UNIX-based on-line transaction processing hardware systems.

QUINTEK LAUNCHES TWIN VECTOR

Bristol, UK-based Quintek has introduced SeQuin - an extremely fast twin vector processor board which fits into a single expansion slot on the IBM PC/AT.

With its Zoran applications library, SeQuin is appropriate for use in digital signalling processing, especially in applications requiring a high throughput of data like radar, sonar, instrumentation, data acquisition and flash analysis.

Fitted with two Zoran floating point vector processors, SeQuin has been developed as a partner for the ZR61454 Zoran development system and is fully compatible with all other Quintek vector accelerator boards. SeQuin includes a size 4 TRAM slot for extra processing power or graphics/communications capability. The parallel software environment makes it easy to join and program multiple cards.

* Quintek has also launched Vectlib, a vector library written by US software house Sinetec analysis Inc and including more than 350 vector primitives to accelerate vector/matrix, signal processing and neural-network operations. Hand coded in T800 assembler and de-

TAOS

SUPER EFFICIENT GENERAL PURPOSE PARALLEL OPERATING SYSTEM

Features

Multi-user, multi-tasking
Portable "virtual processor" binary code
Fully distributed, masterless, object-based
Automatic, dynamic distribution of applications
Networks of mixed processor types and any star topology
Realtime kernel
Fault tolerant

Multiple target, optimising macro assembler
Realtime Graphics User Interface
Hyperlink - including Hypertext System
Full support for embedded applications
ROMable code

Quarter 1 1991:-
Realtime, interactive debugger
C Compiler
Advanced self-distributing parallel Ocean compiler

Developers Package

£3,600

TAOS Operating System

DOS Kernel	GUI
Assembler	Library of tools
Programmers Editor	Hyperlink

Multiprocessor and Graphics Board

2x65 Mhz T800 TRAMs
1 Mb VRAM, 1 Mb DRAM
256 colours from palette of 16.7 million
Medium resolution 512 x 512

Optional Extras:-

DOS PC 386 file server	
Multisync monitor	£ 385
Hi-res graphics up to 1280 x 1024 with additional 1 Mb DRAM	£1,145

We also supply larger, customised systems with additional processing power and/or terminals

Other processor versions available early '91, including i860, Sparc, AEM.

FOR FURTHER INFORMATION PLEASE CONTACT:-
